HD65

The Heavy-Duty HD65 is well suited for commercial use, excessive debris and heavy sand/soils. With a heavier transmission and a removable/replaceable front cutting blade it is meant for years of service. Sifting screens can be removed and replaced easily for adjustment to sand conditions. Attaching to a tractor 3 point hitch and PTO power driven, the HD65 is very maneuverable on site compared to large tractor pull behind models. Requires a hydraulic rear coupler for dumping cylinder. The vibrating screen mechanism of the HD65 can separate debris from sand such as shells, cigarette filters, bottle caps, etc. It is not limited to beach use, it also works well on any sand/sandy soils and even horse arenas/paddocks. For tractors *without* rear hydraulic couplers, there is an optional manual hydraulic lever pump kit to actuate the cylinder.

Tractor Horsepower Required	Minimum 35HP
Working Width	65 Inches
Working Depth	Up to 6 Inches
Weight of Unit	661 lbs.
Material Treatment	Fully Hot Dip Galvanized

Easy to remove and replace screens. Lifts up and out of the top.
